NSW Flood Scenarios Outlook

For the Queanbeyan and Murrumbidgee catchments

FOR OFFICIAL USE ONLY. Not for onward distribution. For use by emergency services agencies only, as a guide for preparedness. Information presented is uncertain.

ISSUE NUMBER - 1

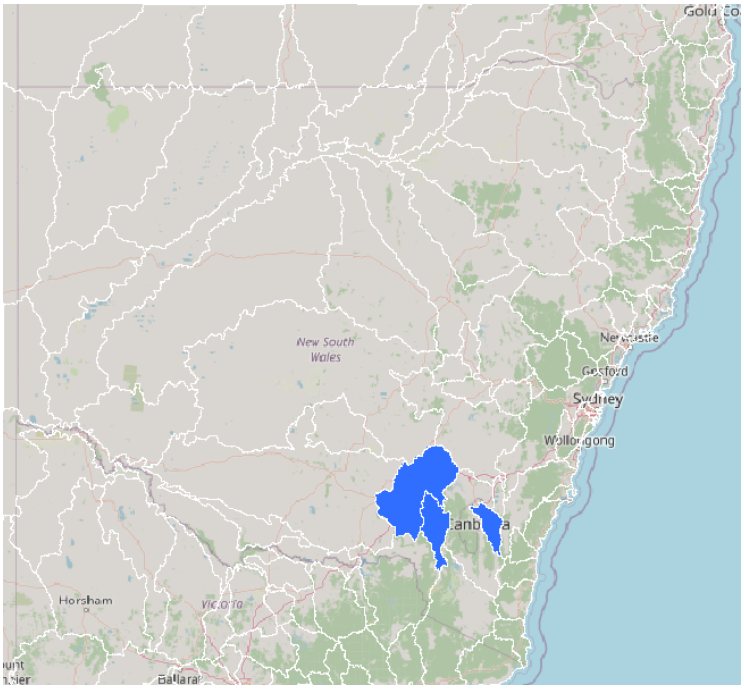
ISSUE TIME
02/03/2026 12:59 AEDT

START TIME OF FORECAST
02/03/2026 12:00 AEDT

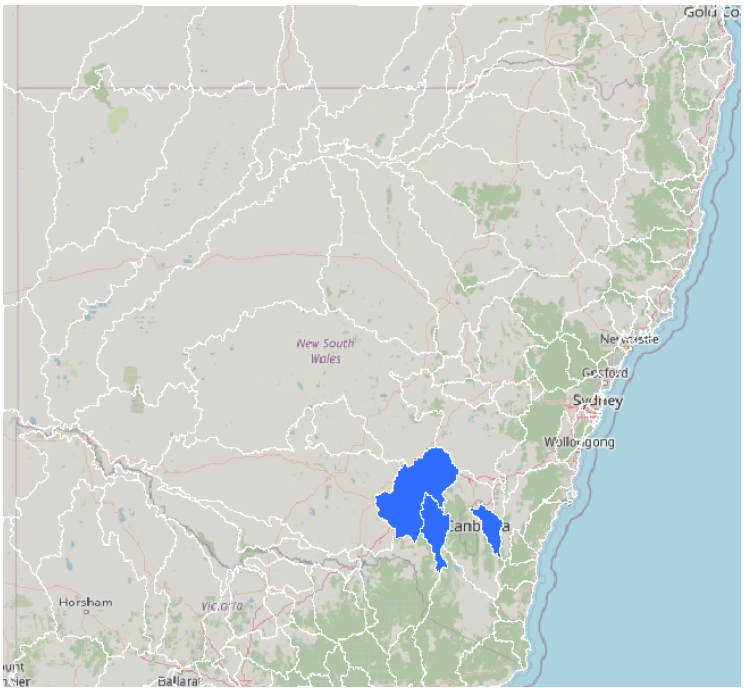
Event Description

- Heavy rainfall likely Monday and into Tuesday
- River levels likely to remain below minor, but localised flooding possible with heavy falls
- Flood Watch current for parts of NSW, including the Queanbeyan and Murrumbidgee catchments

Scenario 1
Most Likely



Scenario 2
Higher Possible



Below Flood Level | Minor | Moderate | Major | No Scenario

Maps show the highest flood classification reached in each area based on the 7-day model runs.

This report is produced to assist emergency services to plan and prepare for flood events. The scenarios presented use forecast rainfall and estimates of catchment wetness and rainfall losses, and are uncertain. The scenarios are based on the best available information at the time of issue, however actual river levels may differ from those shown in this report. Remember to check flood watches and flood warnings for the latest official forecasts.

NSW Flood Scenarios Outlook

Tumut River

FOR OFFICIAL USE ONLY. Not for onward distribution. For use by emergency services agencies only, as a guide for preparedness. Information presented is uncertain.

Scenario 1 - Tumut River

No	Site Name	Highest Modelled Level (m)	Time/Date
1	Tumut	0.5	02/03/2026 12:00 AEDT

7-DAY-OUTLOOK: Modelled Flood Level - Onwards from 02/03/2026 12:00, 6 hr increments

No	Site Name	02/03	03/03	04/03	05/03	06/03	07/03	08/03	09/03
1	Tumut								

Scenario 2 - Tumut River

No	Site Name	Highest Modelled Level (m)	Time/Date
1	Tumut	0.5	02/03/2026 12:00 AEDT

7-DAY-OUTLOOK: Modelled Flood Level - Onwards from 02/03/2026 12:00, 6 hr increments

No	Site Name	02/03	03/03	04/03	05/03	06/03	07/03	08/03	09/03
1	Tumut								

Below Flood Level | Minor | Moderate | Major | No Scenario

Maps show the highest flood classification reached in each area based on the 7-day model runs.

About this product

- The river levels in this product are direct outputs from hydrological models, with limited forecaster input. The scenarios presented use forecast rainfall and estimates of catchment wetness and rainfall losses, and are uncertain.
- The highest river height modelled within the 7-day period may not necessarily equate to the peak height for this event, as some slower-responding sites may peak after this period.
- Forecast locations, as defined in the Service Level Specification (SLS) for each State/Territory, and with modelling capability available, are included.
- Remember to check flood watches and flood warnings for the latest official forecasts.

NSW Flood Scenarios Outlook

Murrumbidgee River to Wagga Wagga

FOR OFFICIAL USE ONLY. Not for onward distribution. For use by emergency services agencies only, as a guide for preparedness. Information presented is uncertain.

Scenario 1 - Murrumbidgee River to Wagga Wagga

No	Site Name	Highest Modelled Level (m)	Time/Date
1	Gundagai (Murrumbidgee River)	1.7	02/03/2026 12:00 AEDT
2	Wagga Wagga	1.4	03/03/2026 05:00 AEDT

7-DAY-OUTLOOK: Modelled Flood Level - Onwards from 02/03/2026 12:00, 6 hr increments

No	Site Name	02/03	03/03	04/03	05/03	06/03	07/03	08/03	09/03
1	Gundagai (Murrumbidgee River)								
2	Wagga Wagga								

Scenario 2 - Murrumbidgee River to Wagga Wagga

No	Site Name	Highest Modelled Level (m)	Time/Date
1	Gundagai (Murrumbidgee River)	1.8	03/03/2026 11:00 AEDT
2	Wagga Wagga	2.8	03/03/2026 10:00 AEDT

7-DAY-OUTLOOK: Modelled Flood Level - Onwards from 02/03/2026 12:00, 6 hr increments

No	Site Name	02/03	03/03	04/03	05/03	06/03	07/03	08/03	09/03
1	Gundagai (Murrumbidgee River)								
2	Wagga Wagga								

Below Flood Level | Minor | Moderate | Major | No Scenario

Maps show the highest flood classification reached in each area based on the 7-day model runs.

NSW Flood Scenarios Outlook

Queanbeyan and Molonglo Rivers

FOR OFFICIAL USE ONLY. Not for onward distribution. For use by emergency services agencies only, as a guide for preparedness. Information presented is uncertain.

Scenario 1 - Queanbeyan and Molonglo Rivers

No	Site Name	Highest Modelled Level (m)	Time/Date
1	Queanbeyan (Queens Bridge)	3.3	02/03/2026 12:00 AEDT
2	Oaks Estate	0.5	02/03/2026 12:00 AEDT

7-DAY-OUTLOOK: Modelled Flood Level - Onwards from 02/03/2026 12:00, 6 hr increments

No	Site Name	02/03	03/03	04/03	05/03	06/03	07/03	08/03	09/03
1	Queanbeyan (Queens Bridge)								
2	Oaks Estate								

Scenario 2 - Queanbeyan and Molonglo Rivers

No	Site Name	Highest Modelled Level (m)	Time/Date
1	Queanbeyan (Queens Bridge)	3.3	02/03/2026 12:00 AEDT
2	Oaks Estate	0.5	02/03/2026 12:00 AEDT

7-DAY-OUTLOOK: Modelled Flood Level - Onwards from 02/03/2026 12:00, 6 hr increments
